

The 2024 – 2025 Status of Electronic Technology

By: Troy Basu

Over the last couple years, technology has advanced tremendously, especially electronic technology. Specifically, devices commonly used consisting of phones, laptops, or accessories (such as headphones) have been improved greatly. The main competitors for these devices consist of Apple, Samsung, Google, and many more. In this article, we will take a deep dive into the recent technological advancements this year, including the new Apple and Samsung advancements consisting of the new iPhone 16 with its new A18 (Pro) chip, Apple AI, the new Samsung Flip 6, and Galaxy AI.

Diving into the iPhone 16 in which was recently released on September 20th, 2024, there have been many improvements from the previous generations. For example, the new A18 chip which has been implemented into the iPhone 16. This chip's CPU is about 15% faster than the A16 Bionic chip in the iPhone 15 (*Apple A18 Pro Vs Apple A16 Bionic [cpubenchmark.net] by PassMark Software, n.d.*) This means that simple tasks on the iPhone are much smoother, allowing for more efficient use. Additionally, with Apple AI slowly being integrated into both the iPhone 15 and 16, you will be able to use the iPhone 15 and 16 much more effectively. Apple AI includes an improved Siri, writing tools, summarization tools, and much more.

One student from a local school, Dexter Southfield, said, "The iPhone 16 and iPhone 16 Pro is a remarkable phone if you're switching from a model 3 years or older. The phone's new display, the use of USB-C, the new action buttons, and titanium frame all play a part in what makes this phone special. However, the iPhone 16 Pro's difference from the normal models and previous two models doesn't make it a great contender if you want to switch from those models. But for me, I found that when switching from the iPhone XR, which they discontinued software updates on, the iPhone felt slow, so the iPhone 16 Pro was a great choice. In general, I wouldn't recommend buying a new iPhone every year, but if you do have an old phone and you want to upgrade to the newest model, I would recommend it." – Zachary Bouzari.

A bit before Apple AI, Galaxy AI was also introduced. With Galaxy AI, there are now many new features which makes the use of Samsung phones, tablets, and more much easier. For example, with the new “circle to search” with Google, with Galaxy AI, you can now circle parts of images or text and search them on Google with ease. Another very useful feature is the new live translations. This means that if you are on a live call, AI will be able to translate the call from any language live.

As far as photography goes, Galaxy AI also allows you to edit photos with photo assist which can move objects, zoom in, reframe, and remaster photos with AI. Furthermore, with the FlexCam on the GalaxyFlips and GalaxyFolds, there is now an auto zoom feature with the help of AI. This will allow photos from a far to be auto zoomed, filling the frame. Devices which will include Galaxy AI include the Galaxy S Series, Galaxy Z Series, Galaxy A Series, Tablets, Galaxy Books, Galaxy Buds, Galaxy Watches, and the Galaxy Ring.
